

COMP 1451 Lab 9-a

For this lab you will complete the class `MyArrayList` by implementing the `MyList` interface provided. The implementation you write must use an array of `Object`, declared like this:

```
private Object[] theList;
```

To successfully implement the interface you must provide a non-abstract version of all the methods in the interface.

Demonstrate your completed project to your instructor or TA before leaving the lab. A suggested solution will be given during the next class and labs that have not been checked off will not receive any points.
